

Smelling the Scents of Olive Oil

This display is made up of **preserved plants** and **artificial elements**.

Preserved plants are natural plants whose sap has been replaced with **vegetable glycerin**. In this way, the plants retain their color and suppleness for many years.

They require **no soil, air, light, or watering**.

Here, the preserved plants include **moss, ivy, mushrooms, beech branches, hazel branches, olive leaves, ferns, and lichen**. The **artificial elements** include **apples and cocoa (leaves and pods)**.
